

8.0 Wiring and Plumbing

Most panels are shipped pre-routed for wiring. For wall panels, a horizontal wiring chase is routed into the panel. This chase is custom routed according to your plans so that it will be at a uniform height from the floor deck (**Figure 49**). There is also a vertical rout centered in each panel, two feet in from either side. These wiring chases are 1-1/2" square and centered between inside and outside panel faces.
